

JAGRUTI

POWER BI, 6+

Summary: Microsoft Power BI Developer with 6+ years of IT experience in designing, developing, and supporting enterprise reporting and analytics solutions. Proficient in creating interactive Power BI dashboards, reports, and data models using DAX, Power Query (M), and SQL. Experienced in data extraction, transformation, and integration from multiple data sources to deliver accurate business insights. Skilled in report optimization, troubleshooting, and performance tuning to ensure reliable and efficient reporting solutions. Hands-on experience with CI/CD pipelines, deployment processes, and release management using Azure DevOps. Strong background in preparing technical documentation, functional specifications, test cases, and deployment documents. Experienced in unit testing, defect resolution, and supporting end-to-end software development lifecycle activities. Actively involved in design reviews, platform operational reviews, and stakeholder discussions to ensure solution quality and compliance with business requirements. Proven ability to deliver scalable, high-performance business intelligence solutions that support data-driven decision-making and operational excellence.

SKILLS

Business Intelligence & Reporting

- Microsoft Power BI Dashboard and report development.
- DAX (Data Analysis Expressions) Measures, KPIs, and calculated fields.
- Power Query (M) Data extraction, cleansing, and transformation.
- Data Modeling Building relationships and optimized datasets.
- Data Visualization Interactive charts and business insights.

Database Technologies

- SQL Server Data storage and reporting support.
- SQL Queries Data retrieval, validation, and analysis.

EXPERIENCE

WITQUALISTECHNOLOGIES PVT LTD

As Power BI,

Other ORGANIZATION

Different Roles

PROJECTS

Project #1: CureWell Healthcare

Role: Power BI Developer / Power Platform Developer

Technologies: Power BI, DAX, Power Query (M), SQL, Microsoft Dataverse, Azure DevOps, Power Automate, CI/CD

Description:

CureWell Healthcare is a healthcare management and analytics platform designed to streamline patient operations, appointment scheduling, billing processes, and healthcare performance monitoring. The solution provides centralized reporting and business intelligence capabilities to help management track operational efficiency, patient trends, revenue performance, and service quality through

- Data Integration Combining data from multiple sources.

- Data Transformation Cleansing and preparing business data.

Microsoft Technologies

- Microsoft Dynamics 365 CRM customization and configuration.

- Microsoft Power Apps Canvas and Model-Driven application development.

- Microsoft Power Automate Workflow and process automation.

- Microsoft Power Pages External user portal development.

- Microsoft Dataverse Data management and application backend.

Development & Customization

- JavaScript Form scripting and client-side customization.

- C# Plugin and custom business logic development.

- Plugin Development Event-driven automation and validations.

- FetchXML Data retrieval and reporting queries.

- Business Process Flows Process automation and tracking.

DevOps & Deployment

- Azure DevOps Source control and release management.

- CI/CD Pipelines Automated build and deployment processes.

- Solution Deployment Environment migration and releases.

- XRMTToolBox Administration and productivity tools.

Testing & Documentation

- Unit Testing Validation of

interactive dashboards and automated reporting.

Roles & Responsibilities:

- Developed interactive Power BI dashboards and scorecards to monitor patient volume, treatment outcomes, revenue performance, appointment utilization, and operational KPIs.
- Designed and maintained scalable data models by integrating data from Dataverse, SQL Server, and external healthcare systems using Power Query (M) for accurate reporting.
- Created advanced DAX measures, KPIs, and calculations to support trend analysis, forecasting, and executive decision-making while improving report performance.
- Prepared functional and technical documentation, test cases, and design specifications, while participating in reviews to ensure reporting quality and compliance.
- Managed report deployments through Azure DevOps CI/CD pipelines, provided production support, resolved data issues, and optimized report refresh and dashboard performance.

Project #2: Smart Health Insurance

Role: Power BI Developer

Technologies: Power BI, DAX, Power Query (M), SQL Server, Azure DevOps, Dataverse

Roles & Responsibilities:

- Developed interactive Power BI reports and dashboards to provide visibility into insurance claims processing, policy lifecycle management, customer engagement, and business performance metrics.
- Performed data extraction, transformation, and integration from Dataverse, SQL Server, and third-party systems using Power Query (M), improving data quality and reporting consistency.
- Designed reusable DAX calculations, measures, and KPIs to support business analysis, trend monitoring, and executive-level decision-making.
- Created business requirement documents, technical design specifications, unit test cases, and validation reports while participating in design review sessions with business and technical stakeholders.
- Supported CI/CD-based deployment activities through Azure DevOps, conducted production issue analysis, monitored platform performance, and implemented report optimization improvements to enhance user experience.

application functionality.

- Test Case Preparation Functional and regression testing support.
- Technical Documentation Design and implementation documents.
- Functional Documentation Business requirements and user guides.
- Design Reviews Solution review and quality assurance.
- Platform Operational Reviews Monitoring and support activities.

Support & Optimization

- Troubleshooting Issue analysis and defect resolution.
- Performance Optimization Improving report and application efficiency.
- Production Support User support and incident management.
- Security Roles & Permissions Access control and governance.

EDUCATION

Post-Graduation (Master's Degree) |
2016 | CGPA: 5.09

Graduation (Bachelor's Degree) |
2014 | CGPA: 6.17

CERTIFICATION

Microsoft Certified: Power Platform
Functional Consultant Associate
(PL-200)

Project #3: Expense Tracker Analytics & Reporting System

Role: Power BI Developer

Domain: Finance & Expense Management

Technologies: Power BI, DAX, Power Query (M), SQL Server, Azure DevOps, Dataverse

Duration: April 2022 – December 2022 (9 Months)

Description:

Expense Tracker Analytics & Reporting System enabled finance and management teams to monitor employee expenses, reimbursement processing, policy compliance, spending patterns, and budget utilization through centralized analytics and reporting.

Roles & Responsibilities:

- Designed executive-level Power BI dashboards to provide real-time visibility into expense approval bottlenecks, reimbursement turnaround times, policy exceptions, and departmental spending trends.
- Developed robust ETL processes using Power Query (M) and SQL to standardize and transform financial data from Dataverse and multiple source systems, improving reporting accuracy and consistency.
- Built advanced DAX-based analytical solutions, including dynamic KPIs, period-over-period comparisons, budget variance calculations, and utilization metrics to support business decision-making.
- Authored detailed requirement documents, solution design specifications, test scenarios, and unit testing artifacts, while collaborating with stakeholders during design reviews to validate reporting requirements.
- Managed end-to-end report lifecycle activities including CI/CD deployments via Azure DevOps, production issue resolution, platform operational reviews, and dashboard performance optimization initiatives.

Project #4: Performance Review Analytics System

Role: Power BI Developer

Technologies: Power BI, DAX, Power Query (M), SQL Server, Azure DevOps, Dataverse

Description:

Performance Review Analytics System was developed to provide HR leadership and management teams with actionable insights into employee performance evaluations, appraisal cycles, goal achievements, review completion rates, and workforce productivity metrics.

Roles & Responsibilities:

- Developed interactive Power BI dashboards to analyze employee appraisal outcomes, review completion status, goal achievement metrics, manager feedback trends, and organizational performance indicators.
- Integrated and transformed performance review data from Dataverse, SQL Server, and HR management systems using Power Query (M), enabling a centralized and trusted reporting environment.
- Created sophisticated DAX calculations for performance scoring, rating distributions, year-over-year comparisons, employee ranking analysis, and workforce trend reporting.
- Produced detailed business requirement documents, report design specifications, data mapping documents, unit test cases, and validation reports while participating in cross-functional design review sessions.
- Led report release activities through Azure DevOps CI/CD processes, supported production troubleshooting, conducted platform operational reviews, and implemented performance enhancements to improve dashboard scalability and refresh efficiency.
