

SHAIK

NETSUITE DEVELOPER, 6+

Summary: Results-driven NetSuite Developer with 6+ years of experience in NetSuite ERP development, customization, administration, integrations, workflow automation, and enterprise business process optimization. Experienced in designing and implementing scalable NetSuite solutions using SuiteScript 1.0/2.0/2.1, SuiteFlow, SuiteBuilder, SuiteTalk, REST/SOAP APIs, and third-party integrations.

Strong background in Retail, E-Commerce, Healthcare, Real Estate, Property Management, and Food & Beverage industries with expertise in Order Management, Inventory Management, Procurement, Fulfillment, Supply Chain Operations, and Financial Management.

Hands-on experience integrating NetSuite with external applications, warehouse management systems (WMS), e-commerce platforms, middleware solutions, and AI-powered services. Skilled in Generative AI, OpenAI GPT integrations, workflow automation, predictive analytics, NLP-based document processing, and intelligent business process automation.

Experienced in developing scalable integrations, real-time inventory synchronization, warehouse automation workflows, customer order lifecycle management, and omnichannel retail solutions. Strong knowledge of REST APIs, SuiteTalk integrations, JavaScript, JSON, SuiteBuilder customizations, SuiteAnalytics, SuiteBundler, and enterprise application architecture.

Proven ability to collaborate with cross-functional teams, lead technical discussions, prepare technical specifications, mentor junior resources, conduct code reviews, and deliver scalable NetSuite solutions aligned with business objectives.

PROJECTS

PROJECT 1: SUN COMMUNITIES

Role:

NetSuite Functional Consultant / NetSuite Developer

Description:

Sun Communities is a leading real estate investment trust operating manufactured housing and RV communities across the United States and Canada. The implementation focused on NetSuite customization, workflow automation, property management processes, and enterprise integrations while improving operational efficiency and reporting capabilities.

Roles & Responsibilities:

- Developed and maintained NetSuite customizations using SuiteBuilder, SuiteFlow, and SuiteScript-based solutions.
- Designed and implemented custom workflows, approval processes, saved searches, dashboards, and KPI scorecards.

Magento Integrations

- Built SuiteTalk integrations between NetSuite and external business systems using REST and SOAP services.
- Participated in technical solution design, integration architecture discussions, and business process optimization initiatives.
- Worked on AI-driven automation opportunities using intelligent workflow routing and document processing solutions.
- Designed data structures to support predictive analytics and reporting requirements.
- Developed technical and integration requirement documents for development teams.
- Participated in client workshops, requirement gathering sessions, and technical discussions.
- Supported inventory management, customer operations, and financial workflows.
- Collaborated with business users to improve operational processes through automation.

PROJECT 2: RUBIK PMS APP

Role:

NetSuite Administrator / NetSuite Developer

Description:

Rubik PMS is a cloud-based property management platform designed for real estate organizations to manage sales, leasing, facility management, contracts, financial operations, and customer interactions through a centralized business platform.

Roles & Responsibilities:

- Developed NetSuite customizations supporting real estate and customer management operations.
- Created SuiteFlows and workflow automation processes to streamline sales and leasing operations.
- Designed integrations between NetSuite and external applications using REST APIs and SuiteTalk.
- Implemented AI-assisted document classification and automated business process workflows.
- Supported customer lifecycle management and business process automation.
- Prepared technical specifications and integration requirements.
- Worked with business stakeholders to optimize operational workflows.
- Assisted in inventory tracking, order management, and reporting requirements.

PROJECT 3: FULLERTON HEALTH (FHG)

Role:

ERP Consultant / NetSuite Developer

Description:

Fullerton Health is a healthcare platform operating across multiple countries, providing integrated healthcare services. The project focused on ERP modernization, data migration, integrations, automation, and business process optimization.

Roles & Responsibilities:

- Developed custom NetSuite workflows and automation solutions.
- Designed and tested REST API and SOAP API integrations with external healthcare systems.
- Implemented SuiteTalk integrations for seamless data exchange.
- Built custom business logic supporting healthcare operational processes.
- Participated in AI-based automation initiatives for document processing and workflow optimization.
- Supported structured data preparation for reporting and predictive analytics.
- Performed data migration, validation, cleansing, reconciliation, and testing.
- Coordinated with technical teams to implement integration solutions.
- Developed scalable integration frameworks supporting enterprise business processes.
- Provided production support and issue resolution.

PROJECT 4: KIMLY

Role:

Senior Functional Team Member / NetSuite Developer

Description:

KIMLY Group operates within the Food & Beverage industry, managing leasing operations, tenant management, retail space administration, and business operations across multiple locations.

Roles & Responsibilities:

- Developed custom NetSuite workflows and process automation solutions.
- Created and managed SuiteFlow automations supporting leasing and tenant operations.
- Implemented Role-based security, permissions, and access controls.
- Designed inventory and fulfillment process improvements supporting retail operations.

- Worked on warehouse and inventory management process automation initiatives.
- Supported real-time inventory visibility and operational reporting.
- Participated in AI-enabled process automation and intelligent workflow initiatives.
- Managed data migration, validation, reconciliation, and debugging activities.
- Prepared technical requirement documents and solution specifications.
- Collaborated with development teams and stakeholders to deliver scalable NetSuite solutions.
- Supported end-to-end implementation, testing, production support, and issue resolution activities.
