

ANURAG

Senior Software Engineer

PROFESSIONAL SUMMARY

Senior Software Engineer and Automation Specialist with 7+ years of professional experience in designing, building, integrating, and governing enterprise AI agents, Microsoft Copilot extensions, and shared digital workplace automation services. Specialized in C#, TypeScript, Azure OpenAI, Copilot Studio, Microsoft Graph API, and Power Platform ecosystems. Proven track record of delivering 8 comprehensive enterprise projects with a strong focus on secure API design, RBAC/Entra ID security, data-loss prevention (DLP), and scalable CI/CD automation.

CORE SKILLS

Category	Skills & Technologies
Languages & Core	C# / .NET, TypeScript, SQL, Secure API Design, Microservices, Domain-Driven Design (DDD)
Cloud & AI Platforms	Azure, Azure OpenAI, Copilot Studio, Power Platform, Dataverse, AWS (Lambda, S3, EC2), AWS CDK
Integration & Graph	Microsoft Graph API, REST APIs, SharePoint, ERP, HRIS, ITSM, Enterprise System Integrations
Security & Identity	Entra ID, RBAC, Least-Privilege Access, Data-Loss Prevention (DLP), Audit Logging, Compliance-Aware Design, OAuth/JWT
Engineering & DevOps	CI/CD Pipelines, ALM for Power Platform, Automated Testing, Observability, Logging, Git, Docker, Kubernetes, GitHub Actions

PROFESSIONAL EXPERIENCE

1. Enterprise Copilot Rollout & Agent Governance Platform

Role: Senior Software Engineer — Digital Workplace Automation

Duration: Aug 2025 – Present

Tech Stack: C#, TypeScript, Copilot Studio, Azure OpenAI, Microsoft Graph API, Entra ID, CI/CD

Project Description

- Designed and built custom Copilot agents, plugins, Microsoft Graph connectors, and reusable integration patterns for enterprise use cases.
 - Developed secure integrations with ERP, HRIS, ITSM, and SharePoint using governed APIs and least-privilege data access patterns.
 - Embedded governance, Data-Loss Prevention (DLP), and role-based access control (RBAC) directly into every agent build by design.
 - Maintained CI/CD pipelines, automated testing, observability, and audit logging to ensure platform services met enterprise reliability standards.
 - Partnered with security, compliance, and business teams to convert organizational demand into scalable, supportable automation solutions.
-

2. Multi-Level Approval & Helpdesk Automation Suite

Role: Senior Automation Engineer

Duration: Aug 2024 – Jul 2025

Tech Stack: TypeScript, Power Platform, Azure Functions, Logic Apps, Dataverse, REST APIs

Project Description

- Architected multi-level approval workflows and helpdesk automation services saving over 400 hours per month for enterprise teams.
- Built secure REST API integrations connecting internal service desks with Microsoft 365 and external ERP/HRIS platforms.
- Implemented Power Platform DLP automation policies covering thousands of app permissions and data boundaries.
- Applied rigorous ALM for Power Platform, environment management, and automated release pipelines.

- Enforced strict audit logging, compliance reporting, and least-privilege security guardrails across all workflows.
-

3. Azure Graph API Scheduling & Transcription Intelligence

Role: Software Engineer — Cloud & Integrations

Duration: Feb 2023 – Jul 2024

Tech Stack: C#, Microsoft Graph API, Azure OpenAI, AI Builder, TypeScript, Docker, Kubernetes

Project Description

- Developed automated Azure Graph API meeting scheduling and real-time meeting transcription processing services.
 - Engineered AI Builder proof-of-concept pipelines executing automated transcript-to-evidence and rubric scoring evaluations.
 - Integrated Azure OpenAI services with enterprise data sources using secure, token-managed API connections.
 - Designed scalable C# backend services adhering to secure API design principles and containerized deployment patterns.
 - Configured centralized logging and monitoring frameworks to track service health and token consumption metrics.
-

4. Splunk & Power BI Usage Analytics Platform

Role: Software Engineer

Duration: Mar 2022 – Jan 2023

Tech Stack: C#, TypeScript, Power BI, Splunk, Azure, REST APIs

Project Description

- Built comprehensive usage analytics platforms combining Splunk telemetry and Power BI dashboards to track M365 versus Google workspace adoption.
- Developed secure data connectors and REST API ingestion endpoints to aggregate cross-platform utilization logs.
- Implemented rigorous Entra ID authentication and role-based access control (RBAC) for reporting portals.

- Optimized data models and query performance for high-throughput enterprise telemetry data stores.
 - Automated testing and deployment scripts to ensure continuous integration across development and production environments.
-

5. Copilot Studio Extensibility & COE Governance Hub

Role: Integration & Governance Engineer

Duration: Jun 2021 – Feb 2022

Tech Stack: TypeScript, Copilot Studio, Power Platform, Entra ID, Azure Functions

Project Description

- Established the Agents Governance & Admin Plan supporting the internal Copilot Studio Extensibility Center of Excellence (COE).
 - Configured security monitoring, environment management, and governance guardrails for custom agent lifecycles.
 - Developed custom plugins and extension connectors integrated securely with corporate data repositories.
 - Implemented approval workflows and review gates to govern the creation and publication of enterprise bots.
 - Partnered with IT security teams to establish compliance-aware design standards and audit logging mechanisms.
-

6. Digital Workplace Knowledge Base & Insider Portal

Role: Backend & Integration Engineer

Duration: Aug 2020 – May 2021

Tech Stack: C#, SharePoint, REST APIs, Git, Azure

Project Description

- Assisted in developing digital workplace knowledge bases, quick-start guides, and discoverability portals for early associate onboarding.
- Built foundational REST API integrations and backend data components using C# and SharePoint frameworks.
- Supported code version control, Git branching strategies, and CI/CD deployment verification tasks.

- Participated in code reviews, bug fixing, and unit testing routines under senior engineering mentorship.
 - Documented service integration standards and operational handoff models for internal development teams.
-

7. Enterprise Integration & Workflow Automation Portal

Role: Backend Engineer

Duration: Nov 2019 – Jul 2020

Tech Stack: TypeScript, C#, SQL Server, REST APIs, Azure

Project Description

- Contributed to large-scale SaaS backend services and enterprise system integration frameworks within an Agile/Scrum environment.
 - Built secure data processing pipelines and backend integrations for operational automation and analytics.
 - Participated in technical leadership duties, including mentoring junior developers on code quality and security practices.
 - Supported CI/CD processes by maintaining pipeline configurations and automated test suites.
 - Assisted in delivery of assigned backend modules from development through to production testing.
-

8. Intelligent Knowledge Search & Collaboration Engine

Role: Backend Engineer

Duration: Apr 2019 – Oct 2019

Tech Stack: TypeScript, C#, AWS S3, MySQL

Project Description

- Assisted in developing semantic search APIs and secure collaboration tool integrations using modern backend architectural standards.
- Gained familiarity with trunk-based development and pull-request-driven workflows for enterprise applications.
- Supported senior engineers in debugging and optimizing search query performance and data access layers.

- Implemented backend services following security best practices, role-based access, and performance guidelines.
 - Collaborated with distributed teams to ensure seamless integration of search modules with cloud repositories.
-

EDUCATION

Bachelor of Engineering (B.E.)-Rajiv Gandhi Proudyogiki Vishwavidyalaya (RGPV), Bhopal

Graduation Year: 2019
