

ANURAG

SENIOR GCP CLOUD, 7+

Summary:

Senior Google Cloud Platform (GCP) Subject Matter Expert with over 7+ years of professional experience leading the design, security, and delivery of enterprise multi-cloud environments, secure landing zones, network connectivity, identity federation, and DevSecOps pipelines. Deep hands-on expertise across core GCP services, hybrid connectivity, and mapping security controls between Microsoft Azure and GCP to match organizational security postures. Certified Professional Cloud Architect and Security Engineer skilled in driving architecture, hands-on engineering, and advisory support for client Cloud Centres of Excellence.

SKILLS

GCP Core Services &

Architecture: VPC /

Shared VPC, Cloud

Interconnect, HA VPN,

Cloud DNS, Cloud IAM,

Organization Policy

Service, Security

Command Center,

Cloud KMS, Secret

Manager, Cloud Logging /

Monitoring, Pub/Sub,

Cloud Functions, Cloud

Run, Firestore, Dataflow

Network & Security

Design: Hub-and-Spoke

Topology, Hierarchical

Firewall Policies, Private

Service Connect, VPC

Service Controls, CIS

Benchmarks, Privileged

Access Manager, IAM

Conditions

Identity & Access

Management:

PROJECTS

Project 1: Enterprise Multi-Cloud Migration & Secure Landing Zone Hub

Role: Lead GCP Cloud Subject Matter Expert

Duration: Sep 2025 – Till Now

Tech Stack: GCP Landing Zones, Shared VPC, Microsoft Entra ID, Terraform, Security Command Center, Splunk, Python

Project Description:

- Designed secure GCP landing zones and reference architectures, mapping each security control directly to the client's existing Microsoft Azure security posture.
- Architected complex VPC networking topologies including Shared VPC, hub-and-spoke models, subnetting, and hierarchical firewall policies.
- Implemented workforce identity federation between Microsoft Entra ID and GCP IAM via OIDC/SAML, incorporating group-to-role mappings and Context-Aware Access.
- Configured detective controls and SIEM integration, streaming Cloud Logging and Security Command Center findings to Splunk using Dataflow Pub/Sub-to-Splunk.
- Built robust infrastructure-as-code and DevSecOps pipelines utilizing Terraform and Infrastructure Manager alongside policy-as-code and Binary Authorization.

Project 2: Hybrid Connectivity & Advanced Network Security Platform

Role: Senior GCP Network & Security Architect

Duration: Jul 2024 – Aug 2025

Tech Stack: HA VPN, Dedicated Interconnect, Private Service Connect, VPC Service Controls, Palo Alto VM-Series, Panorama

Project Description:

Workforce & Workload Identity Federation, Microsoft Entra ID, OIDC / SAML, Context-Aware Access (Access Context Manager), CyberArk Integration

Security Tooling & SIEM: Palo Alto VM-Series / Cloud NGFW, Panorama, Splunk Integration (Dataflow Pub/Sub-to-Splunk), Varonis

Infrastructure-as-Code & DevSecOps: Terraform, Infrastructure Manager, Policy-as-Code (gcloud terraform vet), Binary Authorization, CI/CD Pipelines

Multi-Cloud & Advisory: Microsoft Azure Control Mapping (Azure Policy, Defender for Cloud, ExpressRoute, Azure Firewall), FinOps, Cloud COE Advisory

EDUCATION

Bachelor of Engineering (B.E.) – Rajiv Gandhi Proud yogiki Vishwavidyalaya (RGPV), Bhopal

Graduation Year: 2019

- Designed hybrid and multi-cloud connectivity implementations using HA VPN and Dedicated/Partner Interconnect bridging GCP, Azure, and on-premises environments.
- Extended Palo Alto VM-Series / Cloud NGFW and Panorama security controls directly into the GCP ecosystem to inspect and secure east-west and north-south traffic.
- Implemented secure service endpoints and isolated workloads using Private Service Connect and strict VPC Service Controls.
- Hardened GCP cloud estates to CIS benchmarks utilizing Organisation Policy Service custom constraints and continuous Security Command Center monitoring.
- Produced client-ready architecture diagrams, network routing specifications, and control mapping documentation for enterprise stakeholders.

Project 3: Enterprise Identity Federation & Privileged Access Control Engine

Role: GCP Identity & Security SME

Duration: May 2023 – Jun 2024

Tech Stack: Workforce Identity Federation, Privileged Access Manager, IAM Conditions, CyberArk, Cloud KMS, Secret Manager

Project Description:

- Designed advanced privileged access models using Privileged Access Manager, granular IAM Conditions, and seamless integration with CyberArk.
- Deployed workforce and workload identity federation workflows integrating external directory services with GCP IAM under strict conditional access policies.
- Managed enterprise cryptographic keys and secrets lifecycles using Cloud KMS and Secret Manager across distributed cloud services.
- Advised client Cloud Centres of Excellence (CCoE) on identity governance, translating complex security requirements into actionable engineering tasks.
- Automated security policy validation checks within CI/CD pipelines using custom Org Policy constraints and gcloud terraform vet.

Project 4: Cloud Monitoring, FinOps & Workload Optimization Framework

Role: GCP Cloud Solutions Architect

Duration: Apr 2022 – Apr 2023

Tech Stack: Cloud Monitoring, New Relic, Cloud Functions, Cloud Run, Pub/Sub, Dataflow

Project Description:

- Supported cost management, FinOps strategies, logging, and application monitoring using Cloud Monitoring and New Relic for high-volume GCP workloads.

- Architected serverless and data streaming workflows using Cloud Functions, Cloud Run, Pub/Sub, and Dataflow to handle real-time enterprise telemetry.
- Established automated alerting, health checking, and performance optimization guidelines for internal delivery teams and client operations squads.
- Authored comprehensive system documentation and operational runbooks for cloud infrastructure maintenance and incident response.
- Collaborated with cross-functional security and engineering teams to resolve infrastructure vulnerabilities and optimize resource utilization.

Project 5: Automated Policy-as-Code & DevSecOps Pipeline

Role: GCP DevSecOps & Infrastructure Engineer

Duration: Jul 2021 – Mar 2022

Tech Stack: Terraform, Infrastructure Manager, Binary Authorization, CI/CD, Container Registry, Python

Project Description:

- Built automated infrastructure-as-code deployment frameworks using Terraform and Google Cloud Infrastructure Manager.
- Integrated Binary Authorization policies into container deployment pipelines to ensure only trusted container images are deployed to GKE environments.
- Automated security compliance validation into continuous integration workflows using policy-as-code guardrails.
- Profiled and optimized cloud resource deployment speeds, minimizing provisioning latency across multi-region environments.
- Maintained rigorous version control protocols and collaborated on shared infrastructure modules across development squads.

Project 6: Multi-Cloud Security Posture Alignment Portal

Role: Cloud Security Engineer

Duration: Oct 2020 – Jun 2021

Tech Stack: Azure Policy, Defender for Cloud, GCP Security Command Center, IAM, Firestore

Project Description:

- Mapped security controls and compliance baselines between Microsoft Azure (Azure Policy, Defender for Cloud, ExpressRoute) and GCP security services.
- Developed inventory tracking tools using Firestore and Python to audit cloud asset configurations and identify compliance drifts.
- Participated in security posture workshops with executive stakeholders, explaining cloud hardening methodologies in plain language.
- Supported the remediation of security findings identified during automated vulnerability scans and architecture reviews.

- Documented cross-cloud control mappings to facilitate smooth migration paths for client legacy workloads.

Project 7: Foundation Cloud Infrastructure & Networking Module

Role: Junior Cloud Engineer

Duration: Mar 2019 – Sep 2020

Tech Stack: GCP VPC, Cloud DNS, IAM, Compute Engine, Git

Project Description:

- Contributed to the foundational setup of virtual private clouds, subnets, and Cloud DNS zones for early-stage cloud deployments.
- Assisted senior architects in configuring basic IAM roles, service accounts, and resource hierarchies.
- Maintained infrastructure configuration scripts and tracked changes using Git version control workflows.
- Participated in internal technical training sessions focusing on cloud networking fundamentals and security best practices.
- Validated basic resource connectivity and firewall rule application across test environments.
