

Professional Experience:

Having 10+ years of experience in the IT industry which includes

- 4+ years of experience in Big Data Engineering leveraging Pyspark, Python, Shell Scripting, Azure DevOps(ADO), Airflow, ControlM and Scala.
- 4+ years of experience in Advanced Analytics like implementation of various Machine Learning Algorithms, Data Pre-processing, Feature engineering, Deep learning, Computer Vision, Natural Language Processing.
- 6+ years of experience in designing, development and implementation of BI tools like Tableau and Power BI.

Technical skills:

Big Data : Hadoop, HDFS, Map Reduce, Hive, SQOOP Spark, Zookeeper, Hue, Cloudera Manager, AWS EMR, DSL
Orchestration Tools : Control-M, Airflow
CI/CD : GIT, Bitbucket
Cloud : Azure, AWS
Reporting Tools : Tableau ,PowerBI, OBIEE 10g/11g
Databases : Oracle, MSSQL Server, Hadoop, Databricks, Snowflake
Database Languages : SQL
Programming language : Shell Scripting, Python, PySpark, Scala
Operating Systems : Windows server 2003/2008/12, UNIX
ETL tools : Tableau Prep, Alteryx
ML/Statistical Tools : Feathr, Dataiku, SPSS Modeller

Educational Qualifications:

- M.Sc in Data Science from University of Essex(Jan 2024), UK
- B.Tech (EEE) from JNT University, Hyderabad.

Certifications and Training

- **Microsoft PowerBI Certified**
- **Tableau qualified Desktop Associate**
- **Tableau Specialist**
- **AZ-900 Azure Fundamental**
- **DP-900 Azure Data Fundamentals**

Professional Experience:

Project#6: Standard Chartered Bank

Role : Sr. Data Engineer

Environment : Hive, Spark Scala, Shell Scripting, ControlM, Tableau , Sql Server, Python

Duration : May 2024 – Till Date

Responsibilities:

- Talking to the client and Gathering the requirements.
- Leading the development team and guiding the junior members.
- Designing the Spark environment for efficient deployment of the clusters.
- Writing efficient code and practicing best memory optimization techniques in Spark.
- Proficient in Apache Spark (Spark Core, Spark SQL), Scala, Hadoop ecosystem (HDFS, Hive)
- Developing shell scripts for automation of the spark jobs using ControlM.
- Developed shell scripts for ingestion of file based data(CSV, json)
- Developed shell scripts for transformation of data, specifically table-to-table movement of data.
- Created shell scripts for validation of data in the UAT phase.
- Proficient in writing efficient Bash scripts for data processing, log management, and deployment automation.
- Connected to various data sources like Hive, APIs, CSV, JSON, Postgres, Oracle in Shell Scripts to get the data.
- Involved in end-end implementation of BI, starting from creating the data lake in Hive to creating the data model in Tableau/PowerBI and building dashboards.
- Designing and Building efficient, appealing and insightful dashboards in Tableau.

Project#5: UBS

Role : Sr. Data Engineer

Environment : Hive, PySpark, Scala, Kafka, Tableau , Sql Server, Teradata, Python

Duration : July 2021 – Nov 2022

Responsibilities:

- Developed Spark applications for distributed data processing.
- Created and managed RDDs (Resilient Distributed Datasets) for data transformations.
- Utilized DataFrames for structured data manipulation and analysis.
- Designed and implemented Spark jobs using Scala or Python.
- Performed data cleansing and preprocessing using Spark transformations.
- Developed Spark Streaming applications for real-time data processing.
- Optimized Spark jobs for performance and resource utilization.
- Implemented Spark SQL queries for data querying and aggregation.
- Worked with Hive and HBase integration for data storage and retrieval.
- Collaborated with data scientists to integrate machine learning models into Spark pipelines.

- Developed custom Spark functions for complex data transformations.
- Wrote Spark applications for batch and stream processing.
- Created and managed Spark clusters for distributed computing.
- Implemented Spark partitioning and caching strategies.
- Monitored Spark jobs using cluster management tools like YARN or Mesos.
- Worked with Spark's data serialization formats (Avro, Parquet, JSON, etc.).
- Debugged and optimized Spark code for performance bottlenecks.

Project#4: Wells Fargo

Role : Sr. Data Specialist

Environment : SSIS, Tableau ,Sql Server, Teradata, Python

Duration : Oct 2017 – July 2021

Responsibilities:

- Interacting with the customers and stakeholders, both on-site and off-shore, to gather and understand their requirements.
- Creating a road map and the relevant timelines for the completion of the project, including the delegation of work among the team mates.
- Consolidating the work and preparing the documentation for the end product.
- Conduct training sessions within the Wells Fargo group to train interested parties in Tableau development at both the basic and advanced levels.
- Handled Tableau development projects like Integrated Organizational Risk Dashboards, HR People's dashboards, Operations Dashboards, Demand and Supply Dashboards, etc.
- Automated the development of more than 30 kinds of charts in Tableau as well as in Python, thereby expediting the whole development work. Implemented the whole project in Python and Django.
- Developed over 50 SSIS packages to automate ETL processes, reducing data processing time by 30%.
- Migrated data from legacy systems to SQL Server using SSIS, ensuring a 99% data accuracy rate.
- Integrated data from SQL Server, Oracle, and flat files into a centralized data warehouse for reporting and analysis.
- Created dynamic SSIS packages with configuration tables, enabling the same package to run across multiple environments (development, testing, production) without modification.

Project#3: Apple Corporation (Apple Maps Project)

Client : Apple Corporation (Apple Maps Project)

Role : Tableau Developer/ Admin

Environment : Tableau , Mac, Hive

Duration : May 2017 - Sept 2017

Responsibilities:

- Being a new setup, my team has been entrusted with task of creating the data marts for the purpose for developing a data warehouse, which can then be queried so as to gain insights into the Mapping project.
- Maintaining the current Tableau environment as well creating new dashboards on demand.
- Extracting the JSON data that resides on HIVE system using Python and creating tables.
- Creating custom queries as data sources and building dashboards, Performing UAT and publishing the dashboards to production.

Project#2: Applied Materials

Client : Applied Materials

Role : Tableau Admin/ Developer

Environment : Tableau

Duration : Aug 2016 – May 2017

Responsibilities:

- Involved in the both the Server support activities as well as Development.
- Handling around 5 Service Now tickets on a daily basis.
- Creating schedules for extract refresh and subscriptions.
- Granting permissions for users and groups.
- Server Monitoring which involves Debugging any alerts or errors on the servers.
- Involved in Server upgrade activities. Upgraded from 9.3 to 10.0.1
- Gathering the requirements from the different users and developing the dashboards.
- Created dashboards in various domains like Logistics, Server performances, Sales etc.
- Prepared different kinds of charts like Gantt chart, Donut chart, Lollipop chart, Sankey chart, Bullet chart, Bubble chart, Heat maps, etc.
- Created complex calculations involving Table Calculations and LODs(Fixed, Include and Exclude).
- Worked with different data sources like Hadoop, Azure, SQL Server, Sharepoint, Shared folder Excel sheets, Oracle etc.
- Also connected to the Tableau server Backend Database (PostgreSQL) and created various analysis related to the performance of the Tableau environment for the upper management.
- Installed and configured Tabmon, which is used for the purpose of monitoring the Tableau server performance.

Project#1: Kurlon

Role : Tableau Developer/Admin

Environment : Tableau

Duration : June 2015 – Aug 2016

Responsibilities:

- Installed Tableau server environment from the scratch.
- Used Tabadmin and Tabcmd commands for administration activities
- Published workbooks and data sources and created extract refresh schedules and subscription schedules.
- Granting permissions to users and groups.
- Performance recording on the server as well as the desktop and tuning the workbooks for better performance.
- Worked with Business Analyst and the business users to understand the user requirements, layout, and look and feel of the application to be developed.
- Created dashboards for various levels of management like CEO and CFOs.
- Generated reports like the 'Sales vs COGs' analysis whereby I had implemented many features like Actions, Sets, Filters, Parameters etc.
- Created different kinds of charts like the Bullet chart, Tree map, Heat map, Histograms, Bubble charts, etc to make the analysis very vivid.
- Made some charts like the What-if-analysis and Forecasting.
- Created a Timeline on a slider with ability to change the range of dates
- Published Workbooks by creating user filters so that only appropriate teams can view it.
- Implemented the new features of the Tableau 9.0 version like LODs.
