

# RITIK

## FULL STACK SOFTWARE ENGINEER, 7+

**Summary:** Senior Full Stack Engineer with 7+ years of experience designing and delivering scalable distributed applications using **React.js, TypeScript, and Node.js**. Experienced in building **high-performance frontend interfaces and backend microservices**, developing **RESTful APIs**, and integrating applications with **cloud infrastructure such as AWS (Lambda, S3, Cognito)**. Proven ability to optimize application performance, implement secure data storage, and collaborate across engineering teams in **Agile environments** to deliver reliable and scalable products.

---

### SKILLS

**Languages & Frameworks:** React.js

TypeScript, Node.js, Next.js

**Frontend:** React.js, ES6+, CSS3

Tailwind CSS, Material UI

Responsive UI development

**Backend:** Node.js, RESTful APIs

Microservices architecture

Serverless architecture (AWS Lambda)

**Database:** MySQL, Redis, Basic

exposure to PostgreSQL

**Cloud & DevOps:** AWS (Lambda, S3,

Cognito, Route53)

CI/CD (GitHub Actions, Jenkins)

Git version control

**Testing:** Jest, React Testing Library

**Architecture:** Micro-frontends,

Component libraries, Distributed

applications

### EDUCATION

B.COM, Delhi – (Bachelor of commerce)

– 72% PGDCA, Jaipur Post Graduation

diploma in computer application

(Information Technology)

### PROJECTS

**Project 1:** Urban Analytics (Product)

**Domain:** Real Estate Analytics Platform

**Duration:** 6 Months

**Technologies:** React.js, TypeScript, Node.js, Next.js, Google Maps API, AWS, REST APIs

**Description** Urban Analytics is a real estate intelligence platform that provides stakeholders with insights and visualization tools to make data-driven property investment decisions.

#### Responsibilities

- Designed and developed responsive **frontend interfaces using React.js and TypeScript**.
- Built scalable **RESTful APIs using Node.js with microservices architecture**.
- Implemented **dynamic routing and server-side rendering using Next.js**.
- Integrated **Google Maps APIs** to display property location insights and geographic data visualization.
- Developed interactive dashboards with charts to visualize real estate analytics data.
- Optimized application performance through efficient API integration and frontend rendering strategies.
- Collaborated with backend teams to ensure seamless **data flow between distributed services**.
- Deployed and integrated backend services with **AWS cloud infrastructure** for scalability.

**Project 2:** Marraforni (Product)

## AREA OF EXPERTISE

Web content Management Strong  
Collaborative Communication skills  
Excellent Problem-Solving Skills Web Site  
Optimization Landing Page Development  
Creating API's on Nodejs

**Domain:** Manufacturing / E-commerce

**Duration:** 8 Months

**Technologies:** React.js, Next.js, Node.js, Tailwind CSS, REST APIs, AWS

**Description:** Marraforni is a manufacturing platform that provides commercial and residential brick ovens with configuration options and digital product catalogs.

### Responsibilities

- Developed scalable **frontend architecture using React.js and Next.js**.
- Implemented dynamic routing and responsive UI components for product browsing.
- Integrated frontend applications with **Node.js backend services via REST APIs**.
- Maintained application responsiveness and cross-browser compatibility.
- Implemented **secure data handling and application security best practices**.
- Improved application performance by optimizing UI rendering and API requests.
- Collaborated with DevOps teams to support **CI/CD pipelines and automated deployments**.

### Project 3: Farmfetch (Product)

**Domain:** Food Delivery Platform

**Duration:** 8 Months

**Technologies:** React.js, React Native, Node.js, Stripe API, AWS, Next.js

**Description:** Farmfetch is an online food ordering platform that allows users to browse restaurants, place orders, and make secure payments through integrated payment services.

### Responsibilities

- Developed scalable frontend applications using **React.js and Redux**.
- Designed and implemented **RESTful APIs using Node.js microservices architecture**.
- Integrated **Stripe payment gateway** for secure online payment processing.
- Built scalable backend services capable of handling large volumes of transactions.
- Implemented **server-side encryption and secure payment workflows**.
- Optimized system performance to ensure fast and reliable order processing.

- Deployed backend services using **cloud infrastructure and distributed architecture**.

#### **Project 4: Kickly (Product)**

**Domain:** Sports Content Design Platform

**Duration:** 4 Months

**Technologies:** React.js, React Native, Node.js, HTML, CSS

**Description:** Kickly is an online sports content creation platform that allows sports organizations to design graphics and promotional material.

##### **Responsibilities**

- Developed interactive UI components using **React.js**.
- Collaborated with cross-functional teams to implement new features and design improvements.
- Participated in **Agile sprint planning, daily stand-ups, and client demos**.
- Ensured code quality through proper documentation and maintainable code practices.
- Integrated frontend applications with backend APIs for real-time data updates.

#### **Project 5: Calliope (Product)**

**Domain:** Testing Automation Platform

**Duration:** 4 Months

**Technologies:** React.js, Node.js, Next.js, Microservices

**Description:** Calliope is an application designed to generate automated test cases and present results in standardized readable formats.

##### **Responsibilities**

- Developed frontend architecture from scratch using **React.js**.
- Designed and implemented **backend APIs using Node.js**.
- Implemented **micro-frontend and micro-backend architecture** to support distributed application modules.
- Built scalable systems capable of handling test execution and reporting workflows.
- Collaborated with clients and stakeholders to demonstrate product functionality.

#### **Project 6: GtaxPro (Product)**

**Domain:** Tax Automation Platform

**Duration:** 8 Months

**Technologies:** React.js, Node.js, REST APIs, Government APIs

**Description:** GtaxPro is a tax automation platform used for calculating taxes and generating government-compliant tax returns and invoices.

**Responsibilities**

- Developed frontend applications using **React.js and modern JavaScript frameworks**.
- Designed and implemented **Node.js APIs to process tax calculations and generate invoices**.
- Integrated government APIs for automated tax calculations and compliance.
- Implemented invoice generation workflows and automated PDF generation.
- Ensured application accessibility and responsive design across devices.

**Project 7: TDS Analysis**

**Domain:** Financial Data Processing

**Duration:** 10 Months

**Technologies:** React.js, Node.js, MySQL, Redis, AWS

**Description:** TDS Analysis is a financial analytics platform used to calculate accurate TDS amounts based on vendor details and government rules.

**Responsibilities**

- Developed the frontend application from scratch using **React.js and Redux**.
- Built scalable **backend services using Node.js**.
- Implemented **MySQL database optimization and Redis caching for performance improvements**.
- Designed backend workflows for automated financial calculations.
- Integrated backend services with **AWS infrastructure for scalable deployment**.

**Project 8: Meeso (Product – In Development)**

**Domain:** E-commerce Platform

**Technologies:** React Native, React.js, Node.js, MySQL, Redis, AWS

**Description:** Meeso is an e-commerce shopping platform that enables users to browse products, place orders, and manage transactions.

**Responsibilities**

- Developed scalable frontend architecture using **React Native and Redux**.
- Implemented **Node.js backend APIs to manage product catalog and orders**.
- Designed database schema and queries using **MySQL and Redis**.

- Integrated backend services with **AWS cloud infrastructure**.
- Built scalable systems to support high user traffic and transaction processing.
