

PRASHANT

MICROSOFT DYNAMICS 365 & .NET, 5+

Summary:

Microsoft Dynamics 365 CE Developer with **5+ years of experience** in designing, developing, and customizing enterprise CRM and .NET applications. Skilled in Microsoft Dynamics 365 CE, C#, .NET Core, ASP.NET MVC, JavaScript, TypeScript, Power Platform, Power Automate, Dataverse, and REST API development. Experienced in developing custom plugins, PCF controls, workflow automation, Business Process Flows, and third-party integrations to streamline business operations. Proficient in optimizing application performance, resolving production issues, and delivering scalable CRM solutions using Azure DevOps and Agile methodologies. Strong background in the complete Software Development Life Cycle (SDLC), with expertise in building secure, high-performance, and user-centric business applications.

SKILLS

Languages: C, C#, JavaScript, TypeScript, HTML, CSS

Tech/Frameworks: .NET Framework, .NET Core, ASP.NET MVC, ASP.NET Web API, React.js, Node.js, Express.js

Developer Tools: VS Code, Visual Studio, Postman, Plugin Registration Tool and XrmToolBox, GitHub, Azure DevOps

CS Fundamentals: OOP, DBMS, DSA, JavaScript Debugging, Workflow Development, Plugin Development

Databases: SQL Server, SSMS, Stored Procedures, Views,

EXPERIENCE

CONFIDENTIAL

(CURRENTLY)

As Microsoft Dynamics 365 & .NET

- Developed 15+ Dynamics 365 plugins, 10+ Power Automate flows, and multiple Business Process Flows, reducing manual processing effort by 30%.
- Developed 5+ custom PCF controls using ReactJS and TypeScript, improving user productivity and reducing manual data entry by 20%.
- Developed and maintained 10+ REST APIs and integrated 3+ third-party services, improving system interoperability and reducing manual effort by 20%.
- Resolved 30+ production issues and optimized CRM plugins and workflows, reducing execution time by 25% and improving application stability.

CONFIDENTIAL

As Software Developer - .NET Developer

- Developed and maintained enterprise web applications using C#, ASP.NET MVC, .NET Core, and SQL Server.
- Developed RESTful APIs and backend services, improving system integration and application reliability.
- Optimized DB operations and application performance, reducing query execution time by 35% and improving UX.

EDUCATION

BTech IT, Gautam
Buddha University,
Greater Noida, India

- Participated in the complete software development lifecycle (SDLC), including requirement analysis, development, testing, deployment, and maintenance.

PROJECTS

DOB (Department of Buildings) (CRM Implementation)

Dynamics 365 CE, C#, Power Platform, JavaScript, Dataverse

- Developed and customized MS D365 CE solutions for inspection management, permit processing, and workflow.
- Built C# plugins, custom workflow activities, and JS web resources to implement business logic and validations.
- Developed Power Pages and Power Automate solutions to streamline inspection requests, notifications, and approval processes and Resolved production issues, optimized plugin performance.
- Collaborated with teams using Azure DevOps throughout the complete SDLC, from requirement to deployment.

Midwestern Financial Group (CRM Implementation)

- Dynamics 365, C#, JavaScript, Power Platform, Dataverse
- Customized Dynamics 365 entities, forms, views, and dashboards to align with business requirements.
- Developed and deployed C# plugins and JavaScript web resources for automation and validation.
- Integrated third-party services including Twilio and Outlook for communication workflows.
- Automated CRM workflows using Power Automate, reducing manual effort by 30%.

MyCRM (Sales, Marketing, Service Business Management System)

.NET Core, React.js, Vite, REST APIs, SQL Server

- Built a CRM system inspired by Microsoft Dynamics 365 using .NET Core (backend) and React.js (frontend).
- Implemented modules for lead management, customer tracking, and workflow automation.
- Designed scalable REST APIs for seamless data communication between frontend and backend.
- Collaborated in a team of 3 developers to ensure optimized performance and maintainable architecture.
