

Ankit

Professional Summary

1. Full Stack Developer with 6+ years of experience in designing, developing, and deploying scalable web and mobile applications using TypeScript, Node.js, React Native, and cloud-native technologies.
2. Strong expertise in AI-native software engineering, leveraging AI tools for code generation, debugging, refactoring, architectural analysis, test creation, and rapid production feature delivery.
3. Proficient in building RESTful APIs using Express.js, implementing JWT authentication, and developing scalable backend services with Node.js and TypeScript.
4. Extensive experience working with MongoDB, Mongoose, Prisma, aggregation pipelines, indexing strategies, transactions, and schema evolution for enterprise applications.
5. Hands-on experience developing cross-platform mobile applications using React Native, Firebase, and integrating Google Play and Apple App Store deployment workflows.
6. Skilled in integrating AI capabilities using Google Vertex AI, prompt engineering, AI-assisted workflows, and generative content pipelines into enterprise applications.
7. Strong knowledge of AWS services including S3, Amplify, CloudFront, and Google Cloud services including Firebase, Vertex AI, and Google Analytics (GA4).
8. Experienced in implementing CI/CD pipelines using GitLab, managing production deployments, secrets management, monitoring, and application health across staging and production environments.
9. Proficient in integrating third-party APIs, webhook security, Firebase Cloud Messaging, payment verification, and real-time market data services.
10. Excellent communication, analytical thinking, and problem-solving abilities with experience collaborating across product, QA, DevOps, and business teams while delivering production-ready solutions.

Technical Skills

Programming Languages: TypeScript, JavaScript (ES6+), Node.js, SQL

Backend Technologies: Node.js, Express.js, REST APIs, JWT Authentication, Background Workers, Cron Jobs

Frontend Technologies: React Native, React.js, HTML5, CSS3, TypeScript

AI & Generative AI: Google Vertex AI, Prompt Engineering, AI-Assisted Development, AI Code Generation, AI Debugging, AI Refactoring, AI Code Review

Mobile Development: React Native, Firebase, FCM, Deep Linking, Google Play Console, Apple App Store, In-App Purchases (IAP)

Databases: MongoDB, Mongoose, Prisma, Aggregation Pipelines, Transactions, Query Optimization

Cloud Platforms: AWS (S3, Amplify, CloudFront), Google Cloud Platform (Vertex AI, Firebase, GA4)

DevOps & CI/CD: GitLab CI/CD, Docker, Git, Deployment Automation, Environment Management

Monitoring & Logging: Sentry, Google Analytics (GA4), Log Monitoring, Incident Management

External Integrations: Twelve Data API, Firebase Cloud Messaging, Webhooks, Payment Verification APIs

Development Methodology: Agile, Scrum, SDLC

Professional Experience

Company Name: WitQualis

Designation: Senior Software Developer

Duration: Jan 2020 - Present

Projects

Project 1: AI-Powered Fantasy Sports Platform

Project Description

Developed an AI-powered fantasy sports platform featuring real-time match insights, personalized recommendations, player analytics, and intelligent content generation using Google Vertex AI.

Responsibilities

- Developed scalable backend APIs using Express.js and TypeScript.
- Implemented JWT authentication for secure user access management.
- Integrated Vertex AI for personalized content generation workflows.
- Developed React Native modules supporting fantasy gaming features.
- Designed MongoDB schemas for high-volume transactional operations.
- Automated deployments through GitLab CI/CD pipelines.

Technologies Used

TypeScript, Node.js, Express.js, MongoDB, Mongoose, React Native, Firebase, Vertex AI, AWS S3, GitLab CI/CD

Project 2: Mobile Investment & Stock Analytics Application

Project Description

Built a cross-platform investment application providing live stock market analytics, AI-generated financial summaries, portfolio tracking, and secure transaction management.

Responsibilities

- Integrated Twelve Data APIs for live market information.
- Built backend microservices using Express.js architecture.
- Developed React Native mobile application components.

- Implemented Firebase push notifications using FCM services.
- Optimized MongoDB queries through indexing strategies.
- Managed application releases across Android and iOS platforms.

Technologies Used

Node.js, Express.js, TypeScript, React Native, MongoDB, Firebase, Twelve Data API, AWS CloudFront

Project 3: AI Customer Engagement Platform

Project Description

Developed an enterprise customer engagement platform that automated communication, personalized interactions, and AI-assisted customer support using Vertex AI and intelligent workflows.

Responsibilities

- Developed AI-powered workflows using Google Vertex AI.
- Designed REST APIs supporting enterprise business operations.
- Implemented secure webhook authentication and replay protection.
- Built MongoDB aggregation pipelines for customer analytics.
- Integrated Firebase messaging for real-time notifications.
- Performed AI-assisted debugging and production issue analysis.

Technologies Used

Node.js, Express.js, MongoDB, Vertex AI, Firebase, React.js, GitLab, Docker

Project 4: Digital Rewards & Subscription Management System

Project Description

Designed a subscription management platform supporting digital purchases, in-app subscriptions, payment verification, and customer engagement across mobile applications.

Responsibilities

- Implemented Google Play receipt verification workflows.
- Developed backend services using Express.js and Node.js.
- Managed MongoDB transactions ensuring data consistency.
- Built React Native interfaces supporting subscription management.
- Configured Firebase Remote Config for feature management.
- Monitored application health using Sentry dashboards.

Technologies Used

Node.js, Express.js, React Native, MongoDB, Firebase, Google Play APIs, Sentry, AWS Amplify

Project 5: Enterprise Workflow Automation Portal

Project Description

Developed an enterprise workflow automation platform integrating AI-powered recommendations, secure APIs, and business process automation for large-scale organizational operations.

Responsibilities

- Built scalable REST APIs using TypeScript and Express.js.
- Implemented scheduled background processing using cron workers.
- Designed optimized MongoDB schema and indexing strategies.
- Integrated Prisma for selected data access workflows.
- Automated production deployments using GitLab pipelines.
- Collaborated with DevOps teams during production releases.

Technologies Used

TypeScript, Node.js, Express.js, MongoDB, Prisma, GitLab CI/CD, Docker, AWS S3

Project 6: AI-Assisted Game Companion Platform

Project Description

Built an AI-powered gaming companion platform providing personalized recommendations, live game statistics, content generation, and seamless mobile engagement through cloud-native services.

Responsibilities

- Integrated Unity WebGL APIs with backend services.
- Developed AI-assisted recommendation workflows using Vertex AI.
- Implemented Firebase Cloud Messaging notification services.
- Built secure APIs using Express.js architecture.
- Managed cloud assets through AWS CloudFront and S3.
- Applied AI-assisted code generation and testing workflows.

Technologies Used

TypeScript, Node.js, Express.js, React Native, Vertex AI, Firebase, AWS S3, CloudFront, Unity WebGL

Education

BE - 2020
