

SONIA

JAVA DEVELOPER,6+

Summary:

Full Stack Developer with 6+ years of experience in Java backend development, enterprise application development, frontend engineering, and scalable web application delivery. Specialized in building high-performance business platforms, microservices-based applications, enterprise APIs, and production-ready solutions using Java, Spring Boot, React.js, and modern full stack technologies.

Strong expertise in developing backend services, REST APIs, microservices architectures, third-party integrations, and secure enterprise applications across multiple domains. Experienced in designing scalable backend systems, improving legacy applications, optimizing application performance, and delivering reliable, maintainable software solutions for business operations.

Skilled in building enterprise-grade applications using Java, Spring Boot, Hibernate, SQL, React.js, and cloud-native development practices. Exposure to Go, GraphQL, and distributed systems for backend service development and modern API implementations as complementary technologies.

Comfortable working with cloud deployments, CI/CD pipelines, containerized environments, and cross-functional teams to deliver efficient, secure, and scalable software solutions.

SKILLS

Languages

- Java
- JavaScript
- TypeScript
- SQL

Backend & Frameworks

- Java
- Spring Boot
- Spring MVC
- Spring Security
- Spring Data JPA
- Hibernate
- Microservices
- REST API Development

PROJECTS

I.SK Astro Sarthi

Role: Full Stack Developer

Tech Stack: Java, Spring Boot, React.js, REST APIs, AI Integration

Objective

Build a Vedic astrology platform providing personalized horoscope insights, kundli generation, and compatibility reports.

Core Contributions

- Developed backend APIs using Java Spring Boot for kundli generation and prediction workflows
- Built responsive React.js modules for horoscope reports and user interaction flows
- Integrated third-party astrology APIs and multilingual support
- Implemented business logic for personalized reports and recommendation systems
- Optimized backend processing and application performance

Impact

- Enabled personalized horoscope delivery across multiple user regions
- Improved user engagement through responsive frontend experience

- Go (Basic to Intermediate)
- GraphQL

Frontend

- React.js
- Next.js
- HTML5
- CSS3
- Bootstrap
- Tailwind CSS

Databases

- MySQL
- PostgreSQL
- MongoDB

Cloud & DevOps

- AWS
- Docker
- CI/CD
- GitHub Actions
- Azure DevOps

Platforms &

Integrations

- Third-Party API Integrations
- Payment Gateway Integrations
- Enterprise Workflow Integrations
- Distributed Systems

Testing & Tools

- JUnit
- Mockito
- Postman
- Jira
- GitHub

- Enhanced backend performance and operational scalability

2.CRO Agency

Role: Full Stack Developer

Tech Stack: Java, Spring Boot, React.js, REST APIs, Analytics Automation

Objective

Develop a conversion rate optimization platform using analytics, A/B testing, and behavioral insights.

Core Contributions

- Built backend APIs and Microservices using Spring Boot
- Implemented A/B testing modules and conversion tracking systems
- Created React.js dashboards for campaign monitoring and analytics
- Integrated reporting systems for business performance tracking
- Improved platform scalability through backend optimization

Impact

- Helped businesses optimize customer journeys and marketing performance
- Improved campaign effectiveness through reporting dashboards
- Reduced manual reporting efforts through automation

3.MultiOps Website

Role: Full Stack Developer

Tech Stack: Java, Spring Boot, React.js, REST APIs

Objective

Enhance the official company website with new features, integrations, and performance improvements.

Core Contributions

- Added new features and frontend enhancements using React.js
- Developed backend APIs using Spring Boot
- Implemented business workflows and integration services
- Improved application performance through backend optimization
- Resolved production issues and enhanced platform stability

Impact

- Improved user experience and frontend responsiveness
- Increased overall site stability and maintainability
- Enhanced long-term scalability through structured development practices

4.NowNow

Role: Backend Developer

Tech Stack: Go, Java, Spring Boot, GraphQL, PostgreSQL

Objective

- Azure DevOps

Develop a digital wallet platform with banking, recharge, campaign, and card management capabilities.

Core Contributions

- Developed backend services using Go and Java for transaction processing workflows
- Built GraphQL APIs for frontend-backend communication
- Integrated banking systems and third-party financial services
- Optimized backend performance and transaction processing
- Supported distributed system architecture and service scalability

Impact

- Supported large-scale active user operations
- Improved transaction efficiency and backend reliability
- Enhanced financial workflow scalability

5.SuperAgent Portal

Role: Backend Developer

Tech Stack: Go, Java, Spring Boot, GraphQL, PostgreSQL

Objective

Build a portal for aggregators and agents to manage transactions, commissions, and payout operations.

Core Contributions

- Developed backend APIs using Go and Java for transaction workflows
- Designed GraphQL APIs for reporting and operational dashboards
- Built secure transaction processing services
- Optimized backend performance and scalability
- Integrated backend services with reporting systems

Impact

- Streamlined commission and payout management
- Improved transaction reliability and operational visibility
- Enhanced platform scalability and maintainability
